

SPECIFICATION AMENDMENTS

Page 36, lines 16-22:

In order to fulfill these requirements, in one of the preferred embodiments of the present invention, the coding gene of the heterologous polypeptide (SEQ ID: 2) in question is translationally fused to the coding sequence of the ATGRP17 gene (SEQ ID: 1), while said fusion is controlled by at least part of the promoter region (SEQ ID: 2 3) of the ATGRP17, this promoter being able to direct the gene fusion expression in the anther's tapetum. In order to prepare said gene construction, the following steps were taken:
